Tailwind - class 2

Tailwind →

- ① framework of CSS
- ② predefined class (no need to create class)
- ③
- ④ more speed creating UI
- ⑤ Helps in styling + Responsiveness in HTML doc.

Till Now we know

- Inline CSS
- Internal CSS
- External CSS

{

- ① Open website tailwind.
- ② All the available in file.

}

Now, → Tailwind CSS.

Installing Tailwind CSS :-

* CDN :- ① Add CDN Link in `<script>` inside head tag.

`<script src="https://cdn.tailwindcss.com"></script>`

when you use CDN Link for tailwind you will not get suggestions for styling. even Properties are not seen when two hover properties.

* 2 Important Installation :-

- (1.) Install Node (download from node.js org)
- (2.) Copy Command - `npm install -i tailwind postcss autoprefixer vite`
- ③ Copy Command - `npx tailwind init -p`
- ④ Add * in Content
- ⑤ Add script in package.json

- Change `main.css` and package.json
- Add (1) ① tailwind base; ↳ Link to html
② tailwind Components
③ @tailwind utilities.
- Install tailwind css intelligence
↳ extension in vs code.

- Steps:-
- ① Install node.
 - ② Run Commands
 - (i) `npm install -D tailwind postcss autoprefixer vite`
 - (ii) `npmx tailwind init -p`
 - ③ Install tailwind css intelligence Extension.
 - ④ Add * in Content
 - ⑤ Add Scripts in package.json
 - ⑥ Create main.css and insert and link:
 1. @tailwind base;
 2. @tailwind Components;
 3. @tailwind utilities;

Add:- "scripts": {
 "start": "vite"

⑦ `<link rel="stylesheet" href="main.css">`

Run:- ① to run: `npm run start`.

- ① Press `x` to start the server.
- ② Press `u` to show server url.
- ③ Press `o` to open in browser.
- ④ Press `q` to quit.

① project:- Razarpayclone website create

(Love babbar clone) { www.razarpayclone.com }
